The Titan Series Golf Buggies are designed for the more demanding golfer. The Titan-S Golf Buggy is no exception being powerful, stable and easily able to handle long demanding golf courses easing over difficult terrain. The buggy comes loaded with lithium power, meaning the Titan-S requires just one 18-hole lithium battery creating a weight saving of over 45kg or 9 stone from typical lead acid batteries and a significant space saving with the battery measuring just (W)160mm x (L)250mm x (H)200mm (6.25" x 10" x 8"). The Battery is supplied fully protected by a sophisticated specially designed battery management system that constantly monitors every cell to ensure the battery is always optimized for the best performance. Charging is also quicker, a flat battery will charge in around 8 hours.

The Titan-S operates through the more conventional steering wheel column that incorporates a 3 light battery management system. The forward and reverse drive is managed through the key switch whilst acceleration is controlled through a single foot pedal meaning the Titan-S is an even easier and comfier ride. The extra power in the Titan-S is controlled on the ground by four large fairway friendly tyres that deliver incredible grip and performance over some of the most difficult terrain, whilst the 'twisting' chassis ensures that the buggy remains stable and all four wheels remain firmly on the ground at all times. The buggy can be quickly and fully dismantled to fit in most hatch backs for easy transportation.
